EVSE Operations Suite

Enterprise Charger Management Platform

Monitor, manage, and optimise your EV charging network at scale

What is EVSE Operations Suite?

EVSE Operations Suite is RIOD's enterprise-grade charger management platform for operators running multiple EV chargers across one or more locations. It provides real-time monitoring, session management, billing, analytics, and AI-powered insights to maximise uptime and revenue.

Available in three tiers: Observe, Operate, and Operate Plus. Each tier builds on the previous, allowing operators to start simple and scale up as their network grows.

Platform Tiers

Observe

Real-time monitoring of all connected chargers. View charger status, active sessions, energy consumption, and basic analytics. Ideal for operators who want visibility without active management.

Operate

Full charger management including remote start/stop, scheduling, tariff configuration, user access management, and detailed reporting. For operators who actively manage their charging network.

Operate Plus

Everything in Operate plus 8 AI-powered modules for predictive maintenance, demand forecasting, dynamic pricing, anomaly detection, energy optimisation, fleet intelligence, revenue analytics, and operational insights.

Feature	Observe	Operate	Operate Plus
Real-time charger monitoring	Yes	Yes	Yes
Session history	Yes	Yes	Yes
Energy consumption reports	Yes	Yes	Yes
Remote start/stop	No	Yes	Yes
Tariff configuration	No	Yes	Yes
User access management	No	Yes	Yes
Scheduling	No	Yes	Yes
Multi-location management	No	Yes	Yes
API access	No	Yes	Yes
AI Predictive Maintenance	No	No	Yes
AI Demand Forecasting	No	No	Yes
AI Dynamic Pricing	No	No	Yes
AI Anomaly Detection	No	No	Yes
AI Energy Optimisation	No	No	Yes

AI Modules - Operate Plus

Predictive Maintenance

Analyses charger performance patterns to predict failures before they happen. Reduces downtime by scheduling maintenance proactively.

Demand Forecasting

Predicts charging demand by time, day, and location. Helps operators plan capacity and staffing.

Dynamic Pricing

Automatically adjusts tariffs based on demand, time of day, and grid conditions to maximise revenue.

Anomaly Detection

Identifies unusual patterns in charging sessions, energy consumption, and charger behaviour for early fault detection.

Energy Optimisation

Optimises energy distribution across chargers based on grid tariffs, solar availability, and demand patterns.

Fleet Intelligence

Dedicated module for fleet operators. Optimises charging schedules, tracks vehicle charging history, and predicts fleet energy needs.

Revenue Analytics

Detailed revenue analysis by charger, location, time period, and user segment. Identifies revenue opportunities.

Operational Insights

AI-generated recommendations for improving charger utilisation, reducing costs, and expanding the network.
